REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: applicant recites a draft sill assembly for receiving both type E and type F draft gears and couplers. The assembly is comprised of a draft sill main body, a coupler opening on the front end of the main body and sized to accept both type E and type F couplers. Flange holes are provided in the bottom wall of the body and arrange to accept the bolt patterns for both type E and F couplers. The assembly is further comprised of a spring basket and a keyslot. The spring basket extends downward from the coupler opening on the front face and is sized and shaped to receive a type F spring biased support assembly. The keyslot is provided on each of the two main body side walls and received a cross key connection from a type E draft gear. A mounting structure accepts a vertical pin connection of a type F draft gear and a drop in removable type E coupler support is removably fitted within the spring basket and serves as a fixed lower carrier surface for supporting the type E draft gear.

The prior art made of reference, taken singularly or in combination, does not adequately disclose the features recited in the instant claims. The prior art reference of Kaufhold et al (US 5,931,101) discloses a lightweight draft sill. However, Kaufhold et al does not specifically disclose all of the parts for mounting both type E and type F draft gear assemblies as recited in the instant claims of the present invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
